

Wireless Based Payment Systems

Wireless payment solutions enable merchants to process credit and debit card payments conveniently and securely, anywhere they go. These innovative terminals offer merchants a cost-effective method to make sales when and where they need to using wireless-based payment gateways. By having a wireless terminal, merchants can enjoy a lower, discounted rate compared to card-not-present transactions. Plus, they can capture card information offline and store transactions for later transmission, this can also benefit merchants who need to accept payments in remote locations. Some of the highlights of a wireless payment system are:

- Support for debit, credit, charge and gift cards, as well as loyalty programs.
- Ability to process secure ATM/debit card transactions.
- Supports for Address Verification Services.
- Quick transaction times.
- Has the capability to process Purchasing Cards.
- Electronic benefits transfer (EBT) capability.
- Integrated network modem.
- Built-in thermal printers with drop-in paper loading.
- Ability to connect to peripherals, such as bar-code wands and check readers.
- Long-lasting, rechargeable battery pack.
- Superior Customer Service – We provide technical and account support to merchants seven days a week, as well as access to online documentation and user guides.

A Metro Merchant Services

Wireless Based

Payment System
